

Recommend and Diagnose a Model

Optimize Log Retention: How IRQ and RwIQ Fit Your Strategy

Diagnose

Goal: Surface customer’s log usage patterns and retention needs

Step 1: Ask Targeted Questions to Identify Use Case

- **Retention Need:** What is your expected retention period
- **Query Frequency:** How often will logs be queried? Daily? Occasionally?
- **User Profile:** Who will query logs?
- **Cost Priority:** Do we need predictable monthly costs of cost optimization?
- **DQL Proficiency:** Are you familiar with DQL best practices?

Recommend

Goal: Match use Case to IRQ, RwIQ or Layered model

Step 2: Map Findings to the “Best Fit” Licensing Model

- **Retention Need:** Long term
- **Query Frequency:** Occasional or rare queries (e.g., compliance audits)
- **User Profile:** Advanced teams following best DQL practices
- **Cost Priority:** Cost Optimization is the priority
- **DQL Proficiency:** High proficiency/ advanced query skills

- IRQ (Ingest, Retain, Query)**
- **Long Term Retention:** 1-10 years
 - **Best for:** Compliance/audit data or infrequent queries

- **Retention Need:** Short term
- **Query Frequency:** High frequency / daily queries, unpredictable spikes in query demand
- **User Profile:** Novice DQL users or external contractor
- **Cost Priority:** Predictable monthly cost is critical
- **DQL Proficiency:** Low or no proficiency

- RwIQ (Retain with Included Queries)**
- **Short Term Retention:** 10-35 days
 - **Best for:** High query volume, novice DQL users, or unpredictable usage

- **Retention Need:** Short term troubleshooting + long term compliance
- **Query Frequency:** Mix of heavy short-term queries occasional long-term queries
- **User Profile:** Mixed user base (novice + advanced DQL proficiency)
- **Cost Priority:** Need both (predictability for some, optimization for others)
- **DQL Proficiency:** Mixed proficiency across teams

- Layered Model (RwIQ + IRQ)**
- **Short Term Troubleshooting + Long Term Compliance**
 - **Best for:** Combining troubleshooting + analytics + compliance

Plan

Goal: Outline phased adoption and optimization

Step 3: Create a Phased Adoption Strategy

PHASE 1

Start with IRQ for onboarding simplicity

PHASE 2

Monitor query patterns

PHASE 3

Introduce RwIQ selectively for buckets with high query demand

PHASE 4

Combine models for layered use cases

- RwIQ can be added later once usage patterns are clear
- Buckets can be redefined every 24 hours

Escalate

Goal: Recognize triggers involving Licensing or next-tier resources

Step 3: Create a Phased Adoption Strategy

- Query volume exceeds 15x retention quota.
- Customer requests retention beyond 35 days for RwIQ.
- Cost anomalies or Terms of Use violations.
- Need IAM policy adjustments for query restrictions.
